Target Audience
Cardiothoracic and vascular anesthesiologists, critical care physicians, general anesthesiologists, nurses, perfusionists, and other allied health personnel, epidemiologists/researchers, and all those involved in the care of the cardiovascular and thoracic surgery patient will benefit by attending this meeting.

Statement of Need
The field of cardiothoracic and vascular anesthesiology is a dynamic specialty that changes as modern cardiovascular medicine changes. New additions to the armamentarium of cardiovascular medicine include percutaneous interventions, valvular heart surgery, minimally invasive techniques, heart-failure devices, electrophysiologic interventions, and the changing status of cardiac surgery. We will also provide numerous discussions of quality care, including metrics and databasing, as mechanisms to assist attendees in working with their own institutions to improve global quality. Current practitioners in cardiovascular anesthesiology demand an educational course that is current with cardiology and cardiac surgical advances, which the Society of Cardiovascular Anesthesiologists (SCA) Annual Meeting provides. The annual meeting offers teaching of intraoperative echocardiography for management of patients undergoing various cardiac surgical procedures as well as workshops in cardiac imaging, percutaneous valve surgery, transthoracic echocardiography, and extracorporeal repair. The program’s multidisciplinary faculty are those who have a history of excellent evaluations from previous attendees. Interactive workshops and discussion sessions with the experts center on patient-oriented educational programs to teach the requisite skills and concepts necessary for advanced care of these patients. This interdisciplinary program sponsored and offered by SCA for its members has been developed to meet the growing demand for such educational needs.
