General Information

Target Audience
Cardiothoracic and vascular anesthesiologists, critical care physicians, general anesthesiologists, nurses, perfusionists, other allied health personnel, epidemiologists/researchers, and all those involved in the care of cardiovascular and thoracic surgery patients will benefit from attending this meeting.

Statement of Need
Why You Should Attend
The field of cardiothoracic and vascular anesthesiology is a dynamic specialty that changes as modern cardiovascular medicine changes. Changes in the field of perioperative cardiovascular medicine include percutaneous valve interventions, minimally invasive surgical techniques, heart failure devices, electrophysiology procedures, and an aging cardiac surgical patient population. The 37th SCA Annual Meeting and Workshops includes interactive workshops and discussion sessions with experts centered on patient-oriented educational programs to teach the requisite skills and concepts necessary for advanced care of these patients. The program provides attendees with a unique forum for learning about and sharing standards and advances in evidence-based practice and treatment from and with colleagues in cardiothoracic and vascular anesthesiology.

This meeting provides attendees the opportunity to
• discuss current practice and recent advances in cardiology and cardiac surgery
• interact with multidisciplinary experts in cardiovascular anesthesiology
• discuss how to translate scientific discoveries into clinical practice
• connect with colleagues in different practice settings at numerous networking events, including exhibitor and poster presentation sessions
• discuss quality of care issues, including database metrics, as mechanisms to assist you in working within your own institution to improve quality
• raise questions, debate controversies, plan follow-up studies, and discuss results
• discuss your own research and clinical observations
• meet with more than 200 poster presenters to learn about their work and future research directions
• visit exhibiting companies featuring products and services specifically designed for professionals who study cardiovascular medicine.

What You Can Expect to Gain
The 37th SCA Annual Meeting and Workshops will offer information about current intraoperative management of patients undergoing various cardiac surgical procedures. In addition, this meeting will provide workshops in cardiac imaging, percutaneous valve surgery, transthoracic echocardiography, and extracorporeal support. Presentations are designed to enhance research and/or clinical knowledge and competence pertinent to cardiothoracic and vascular anesthesiology, and will feature content appropriate for professionals at several experience levels. By participating in this meeting, attendees can expect to be able to
• describe the latest advances in perioperative cardiovascular medicine
• critique current trends in clinical and bench research pertinent to cardiovascular medicine
• evaluate new techniques and diagnostic/interventional procedures in cardiothoracic and vascular anesthesiology
• assemble a network of professional colleagues with whom to exchange information about the practice of cardiovascular and thoracic anesthesiology.
